□

X

Hello, World! 😊 I recently graduated from **Loyola University Chicago** with a passion for building elegant solutions to complex problems. My journey into tech started in the Pacific Northwest 🌲 and has led me to the vibrant tech scene of Chicago 🏙️. I thrive on the process of creation, whether it's developing a full-stack application or diving deep into a new machine learning model.

This portfolio is a curated collection of my work, showcasing my skills in software development and data analysis. I'm driven by a love for learning 🧠, constantly exploring new technologies and enjoying the occasional matcha 🍵 at a new cafe to recharge.

🎬 Movie Genre Classification

ML pipeline using TF-IDF and classifiers to predict movie genres from text. Explored NLP and feature extraction for text-based classification.

🕒 Pomodoro Focus Timer

Responsive web app for focus and productivity, built with pure HTML, CSS, and JavaScript. Strengthened skills in DOM manipulation and UI design.

📁 Job Application Tracker CLI

Java 17 command-line tool tracking applications with live analytics and Markdown exports. Features enums for type safety and modular CRUD design.

- Tech: Java 17, JUnit, Makefile, CSV, Markdown
- [View on GitHub ↗](#)

🎮 Java & Web Games Portfolio

A collection of graphical web apps and console-based games. This was a fun exploration of game loops, user input, and object-oriented design principles in both Java and JavaScript.

📊 State Mortality Dashboard

Flask + Plotly dashboard visualizing U.S. mortality trends using CDC data. Includes choropleths and time-series analytics.

☁️ DeveloperSkillAPI

RESTful Java Spring Boot API for managing developer profiles. Demonstrates clean backend structure and CRUD operations.
